Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Finley et al. in view of Capacity Control System and Wacht. Finley shows the claimed system with the exception of the selector switch for switching between a high and low load capacity and limit switches. Capacity Control System teaches the use of a selector switch for selectively switching between a low load and high load capacity. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Finley to comprise a selector switch, as taught by Capacity control System, for switching operation between a high and low load operation, and to comprise limit switches, as taught by Wacht, for sensing the extension limits of his boom. The system of Finley is capable of prevent lifting and lowering between the range, as set forth in claim 3, and permit functioning, as set forth in claims 6 and 7.

Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Finley et al., Capacity Control System and Wacht, as applied to claim 1 above, and

further in view of Bodtke et al. Bodtke teaches a lift vehicle with a tower boom. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Finley to comprise a tower boom, as taught by Bodtke, to enhance the reach of his platform.

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Applicant's arguments with respect to claims 1, 5 and 12 have been considered but are moot in view of the new ground(s) of rejection.
